

Corneial drops

Corneial drops is an adjuvant solution for the prevention of red and tired eyes. Suitable for those who suffer from dry eyes, poor tearing and redness due to external agents and conditioned by the use of contact lenses.

Corneial drops shows a dual anti-inflammatory and antiseptic action, without limiting the healing of the corneal epithelium and the processes of restitutio ad integrum. If effectively applied in a broad spectrum of conjunctivitis and keratoconjunctivitis, the drops helps avoid the serious side effects of corticosteroids and the occurrence of bacterial resistance due to empirical antibiotic therapies, which are often not followed upon medical device.

DOSAGE

Instill 1-2 drops of the product directly in the eye, 2-3 times daily or as prescribed by a doctor.
